

Factsheet

October 2026

SAMCO MUTUAL FUND

The Momentum House.

SAMCO MUTUAL FUND
The Momentum House.

How to Read Factsheet

Fund Manager: An employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He/She is usually part of a larger team of fund managers and research analysts.

Application Amount for Fresh Subscription: This is the minimum investment amount for a new investor in a mutual fund scheme.

Minimum Additional Amount: This is the minimum investment amount for an existing investor in a mutual fund scheme.

Systematic Investment Plan (SIP): Systematic Investment Plan or SIP works on the principle of making periodic investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for a SIP that invests ₹500 on every 15th of a month in an equity fund for a period of three years.

Net Asset Value (NAV): The Net Asset Value or NAV is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which an investor enters or exits the mutual fund.

Benchmark: A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds. Some typical benchmarks include the NIFTY, Sensex, BSE200, NSE500, Crisil Liquid Fund Index and 10-Year Gsec.

Entry Load: A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent. Entry load is charged when an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is ₹100 and the entry load is 1%, the investor will enter the fund at ₹101.

Note: As per Clause 11.7 of SEBI Master circular NoHO/24/13/11(1)2026-IMD POD-1/I/7602/2026 dated March 20, 2026 no entry load shall be charged.

Exit Load: Exit load is charged when an investor redeems the units of a mutual fund. The exit load is reduced from the prevailing NAV at the time of redemption. The investor will receive redemption proceeds at net value of NAV less Exit Load. For instance, if the NAV is ₹100 and the exit load is 1%, the investor will receive ₹99 per unit.

Modified Duration: Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.

Average Maturity: The average time of maturity of all the debt securities held in a portfolio. It states the weighted average maturity of the assets in the portfolio.

Yield to Maturity (YTM): The Yield to Maturity or the YTM is the rate of return anticipated on a bond is held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.

Standard Deviation: Standard deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.

Macaulay Duration: The Macaulay duration is the weighted average term to maturity of the cash flows from a bond. The weight of each cash flow is determined by dividing the present value of the cash flow by the price

Sharpe Ratio: The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.

Beta Ratio (Portfolio Beta): Beta is a measure of an investment's volatility vis-a-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.

Assets Under Management (AUM): Assets Under Management or AUM refers to the recent/ updated cumulative market value of investments managed by a mutual fund or any investment firm.

Holdings: The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

Nature of Scheme: The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is termed an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.

Rating Profile: Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.

Total Expense Ratio (TER): Total expenses charged to scheme for the month expressed as a percentage to average monthly net assets.

Portfolio Turnover Ratio: Portfolio Turnover Ratio is the percentage of a fund's holdings that have changed in a given year. This ratio measures the fund's trading activity, which is computed by taking the lesser of purchases or sales and dividing by average monthly net assets.

Information Ratio (IR): The Information Ratio or IR is a key performance metric that evaluates how effectively an investment manager generates excess returns relative to a benchmark, considering the risk taken.

From the CIO’s desk

October 2026: Global headwinds persist, but the earnings engine is gathering pace

October brought some relief for the headline index, though market breadth stayed weak. After a prolonged losing streak took it to its lowest level in well over a year, the Nifty 50 recovered to end the month modestly higher. The broader market did not join the recovery: mid- and small-cap indices ended lower, and most Nifty 500 stocks declined. Leadership was narrow and concentrated in IT, which rallied sharply on encouraging results from sector leaders, while rate-sensitive and commodity-linked segments such as NBFCs, metals, capital goods and chemicals lagged.

The global backdrop remained challenging. The US Federal Reserve kept rates unchanged after its September hike, but a split vote signalled that further tightening cannot be ruled out. US Treasury yields climbed to multi-decade highs, although cooling off late, keeping global financial conditions tight and drawing capital towards developed-market bonds. Crude oil added to the pressure, as escalating tensions in the Middle East, including an attack on a major Saudi refinery by Iran-aligned Houthi forces, pushed Brent well above $100 per barrel. For India, sustained high oil prices raise the risk of imported inflation, a wider current account deficit and margin pressure in sectors such as oil marketing, aviation, paints and chemicals.

Technology markets offered a useful lesson in separating sentiment from fundamentals. South Korea's KOSPI suffered a steep single-day sell-off in mid-October amid concerns over AI-related capital expenditure and stretched semiconductor valuations. Within two weeks, SK Hynix and Samsung reported record quarterly results, driven by strong demand for high-bandwidth memory. The sell-off reflected valuation and funding concerns rather than weakening demand, a distinction that matters for Indian businesses across electronics manufacturing, semiconductor assembly, data centres and power infrastructure.

Domestically, the Reserve Bank of India raised the repo rate by 25 bps, its first hike in nearly four years, and shifted its stance to calibrated tightening, signalling a clear priority on inflation and currency stability. The rupee came under pressure against the dollar before targeted RBI measures helped it stabilise by month-end. Foreign portfolio investors remained net sellers, but domestic institutions more than absorbed the outflows. Household participation also held firm, with SIP contributions reaching a record high and equity mutual fund inflows rising sharply from the previous month.

The most encouraging signal came from the Q2 FY27 earnings season. Results so far point to revenue growth of over 20% year-on-year, with profits growing even faster, the strongest readings in several quarters and a sign of healthy operating leverage. Mid-caps continue to lead, outpacing large caps on both revenue and profit growth. Valuations also offer comfort, with the market trading meaningfully below its 10-year median multiple.

The primary market continued to reflect the depth of domestic capital. India remains the world's busiest IPO market by deal count this year, a period that included Reliance Jio Platforms' listing, the largest in the country's history. A strong pipeline of draft offer documents points to sustain investor appetite in the months ahead.

October highlighted the gap between a difficult global environment and a resilient domestic economy. Crude oil, US yields, Fed policy and foreign flows may keep markets volatile in the near term, but the foundations for Indian equities look increasingly sound. Earnings momentum is accelerating, domestic investors continue to provide a steady source of support, and valuations have moderated to more reasonable levels after the recent correction. Looking ahead, our outlook remains constructive. As global pressures ease and the earnings upcycle broadens, the current phase of consolidation could set the stage for a healthier, more broad-based market recovery, and the divergence across sectors and market capitalisations is already creating attractive opportunities for selective investors.

Against this backdrop, our investment approach remains focused on identifying emerging momentum through disciplined bottom-up stock selection. We seek companies where improving price momentum is supported by accelerating earnings, strengthening fundamentals and favourable industry dynamics. Rigorous research helps assess the sustainability of that momentum, active portfolio management allows positioning to evolve as indicators change, and disciplined risk management remains integral to the investment process. We believe this approach leaves us well placed to capture the opportunities that lie ahead.

About Strategy

HexaShield Tested Investment

Samco's HexaShield Tested Investment is a strategy to put to work money with businesses that can endure and survive in a variety of stressful situations and generate superior long-term risk adjusted returns. It relies on understanding the resilience of companies based on Samco's HexaShield framework tests and evaluates every company and institution on 6 most important facets of risks and stress. These tests are meant to measure every company's ability to maintain enough buffer to stay afloat under adverse economic scenarios. The HexaShield tests are also designed to understand if these companies can generate high cash returns on capital employed in a variety of economic conditions including degrowth, recession, etc. This rigorous scientific and statistical process helps get an understanding of risks, reduces room for bias and beliefs, inculcates discipline and enhances the probability of success.

3E Investment Strategy

1. Buy only Efficient HexaShield Tested Companies
2. Buy at an Efficient Price
3. Maintain an Efficient Turnover

Active Momentum Strategy

Momentum refers to the tendency of winning stocks to continue to perform well and losing stocks to perform poorly in the near future. In Samco Active Momentum Fund the stocks are also selected based on their performance in the past with the idea that they will continue to outperform. The investors are attracted to a company whose price is on an upward trajectory thus opening a new way of buying at high and selling at higher, instead of the traditional idea of buying at low and selling at high, generating higher returns. A mix of methodologies to compute momentum are used which include but are not limited to Risk-adjusted Price Momentum, Momentum Strength Score & Momentum ratio. The fund makes trades based on trading signals generated by the intelligent algorithm. This algorithm has been developed by studying years of market data including price, volume, volatility, open interest, breakouts, relative strengths and correlations with appropriate weights on various data points.

T.R.A.N.S.F.O.R.M.E.R. Strategy

The principal asset allocation of Samco Dynamic Asset Allocation Fund shall be determined based on momentum in equity markets and extreme mean reversion signals which shall be calculated using SAMCO's proprietary T.R.A.N.S.F.O.R.M.E.R. model. Fundamentally the strategy will operate based on trend following strategies i.e., when markets are in clear uptrends with lower volatility, equity allocations shall be higher and when markets are breaking down, in correction or bear market phases, net equity allocations shall be zero or at extremely low levels. Only in extremely panic or euphoric conditions, the scheme will move to mean reversion models and build equity exposure in bear markets or cut equity exposure in bull markets. Rebalancing based on the model shall happen on real time dynamic basis and will not follow a monthly/quarterly rebalancing model.

D.I.S.R.U.P.T.I.O.N. Strategy

The SAMCO Special Opportunities Fund focuses on generating long-term capital growth by investing in companies experiencing or poised for special situations. These include circumstances like technological disruption, regulatory changes, management restructuring, or prolonged cyclical challenges. The fund targets companies that are either disruptors, enablers, or adaptors of change, as well as those with significant turnaround potential. It leverages inefficiencies in financial markets where the impact of such special situations may be undervalued or overlooked, aiming to capitalize on the resulting mispricing or unanticipated growth potential. The fund's strategy encompasses a broad spectrum, including digitization, insider mirror trading, spin-offs, reforms, undervalued holding companies, premiumization, sustainable trends, innovation, organized shifts, and new or emerging sectors. This diversified approach seeks to exploit a range of growth opportunities across different sectors and market conditions.

Tactical Allocation Strategy

To achieve the investment objective, SAMCO Multi Cap Fund follow active investment strategy which employs a unique and balancedinvestment strategy designed to optimize returns across various market segments. The strategy is built around pre-dominantly allocating 25% each to large caps, mid-caps, small caps, and floating exposure to small caps/foreign securities/debt, ensuring diversified exposure to different market capitalizations. In scenarios such as a bear market, the fund may exercise tactical deviations from its equal weight strategy to safeguard investor capital and optimize returns.

R.O.T.A.T.E. Model Strategy

The principal asset allocation of Samco Multi Asset Allocation Fund shall be determined based on trends in equity markets and trends in prices of Gold, Silver based on SAMCO's proprietary R.O.T.A.T.E. model. Trends in equity, commodity markets and extreme mean reversion signals which shall be calculated using SAMCO's proprietary R.O.T.A.T.E. model. Fundamentally the scheme will operate based on trend following strategies i.e., when markets are in clear uptrends with lower volatility, equity allocations shall be higher and when markets are breaking down, in correction or bear market phases, net equity allocations shall be zero using hedging strategies or at extremely low levels. In such cases, if Gold, Silver as an asset is up trending and exhibiting inverse co-relation to equities, then in such cases, the Fund shall have pre-dominantly higher exposure to Gold, Silver which could go up to 80% of net assets. In cases when both Gold, Silver and Equities are trending down and exhibiting weakness, the Fund will have pre-dominantly higher exposure to debt. Rebalancing based on the model shall happen on real time dynamic basis and will not follow a monthly/quarterly rebalancing model.

C.A.R.E. momentum strategy

SAMCO Large Cap Fund,SAMCO Large & Mid Cap Fund, SAMCO Small Cap Fund, Samco Mid Cap Fund are built on a cutting-edge momentum-based investment strategy that seeks to harness the power of market trends and corporate performance metrics. At its core, the fund employs SAMCO's proprietary C.A.R.E. momentum system to with an aim to deliver superior risk-adjusted returns by systematically identifying and allocating capital to stocks with strong momentum indicators. The C.A.R.E. system integrates four key dimensions of momentum-Cross Sectional Momentum, Absolute Momentum, Revenue Momentum, and Earnings Momentum. These parameters ensure that the portfolio remains optimized by focusing on stocks that exhibit robust momentum traits. The use of derivatives and hedging further strengthens the strategy by mitigating risks during periods of market volatility.

Disclosure on Active Share

The Active Share was first introduced by Martijn Cremers and Antti Petajisto, both Yale School of Management professors whose concepts were first published in the Review of Financial Studies 2009 paper tiled “How active is your Fund Manager”- A New Measure That Predicts Performance.

Active Share measures the fraction of a portfolio (based on position weights) that differs from the benchmark index. The only way that the equity fund manager can outperform a given benchmark is by taking positions that differ from those in the benchmark. Active Share will always fall between 0% and 100%, where 0% will indicate a truly passive index fund and a higher percentage closer to 100% will show true active management with portfolio stocks diverging from the benchmark.

93.87%

As on October 31, 2026

Disclosure on Active Share

The Active Share was first introduced by Martijn Cremers and Antti Petajisto, both Yale School of Management professors whose concepts were first published in the Review of Financial Studies 2009 paper tiled "How active is your Fund Manager"- A New Measure That Predicts Performance.

Active Share measures the fraction of a portfolio (based on position weights) that differs from the benchmark index. The only way that the equity fund manager can outperform a given benchmark is by taking positions that differ from those in the benchmark. Active Share will always fall between 0% and 100%, where 0% will indicate a truly passive index fund and a higher percentage closer to 100% will show true active management with portfolio stocks diverging from the benchmark.

69.01%

As on October 31, 2026

Disclaimer :
We are voluntarily disclosing the Active Share of Samco Multi Asset Allocation Fund in the interest of maintaining high transparency to the investors. Please refer to our website www.samcomf.com/active-share/samco-multi-asset-allocation-fund to view how to calculate active share. Disclosure on Active Share

The Active Share was first introduced by Martijn Cremers and Antti Petajisto, both Yale School of Management professors whose concepts were first published in the Review of Financial Studies 2009 paper tiled “How active is your Fund Manager”- A New Measure That Predicts Performance.

Active Share measures the fraction of a portfolio (based on position weights) that differs from the benchmark index. The only way that the equity fund manager can outperform a given benchmark is by taking positions that differ from those in the benchmark. Active Share will always fall between 0% and 100%, where 0% will indicate a truly passive index fund and a higher percentage closer to 100% will show true active management with portfolio stocks diverging from the benchmark.

86.91%

As on October 31, 2026

Disclaimer :

We are voluntarily disclosing the Active Share of Samco Dynamic Asset Allocation Fund in the interest of maintaining high transparency to the investors. Please refer to our website www.samcomf.com/active-share/samco-dynamic-asset-allocation-fund to view how to calculate active share. The information on Active Share should not be construed as a forecast or promise of returns or safeguard of capital. The Investors who must make their own investment decisions, based on their own investment objectives, financial positions and needs of specific investor.

Past Performance is not an indicator or guarantee of future results
Mutual Fund investments are subject to market risks, read all scheme related documents carefully.

Disclosure on Active Share

The Active Share was first introduced by Martijn Cremers and Antti Petajisto, both Yale School of Management professors whose concepts were first published in the Review of Financial Studies 2009 paper tiled “How active is your Fund Manager”- A New Measure That Predicts Performance.

Active Share measures the fraction of a portfolio (based on position weights) that differs from the benchmark index. The only way that the equity fund manager can outperform a given benchmark is by taking positions that differ from those in the benchmark. Active Share will always fall between 0% and 100%, where 0% will indicate a truly passive index fund and a higher percentage closer to 100% will show true active management with portfolio stocks diverging from the benchmark.

90.95%

As on October 31, 2026

Disclaimer :

We are voluntarily disclosing the Active Share of Samco Large & Mid Cap Fund in the interest of maintaining high transparency to the investors.
